

Instructions

Lab B

Task

Complete and submit exercise 4.1 with your group.

Group

1. You will be assigned to a random group by a TA.
2. Identify your teammate(s).
3. Register for your group on D2L (*Communication > Groups*)
 - Be sure that you register for the group for the specific lab (Lab B).
 - Each member of the group needs to register themselves as belonging to the group.
 - If you register for the wrong group, ask for assistance in being placed in the correct group.

Completion

4. Read the instructions for the exercise, which can be found in the Exercise04.pdf in the Week 2 materials. Ask the instructor/TAs if you have any questions about the exercise.
5. Sit with your teammate(s).
 - You may remain in the lab if you would like to ask further questions, or you may go to another location.
6. Make your best effort to complete the exercise. Lab exercises typically require writing fewer than 30 lines of code and are designed to be completed in the available time.
 - You will pass the lab provided you have registered for your group and your group has uploaded a file which demonstrates a serious effort.
 - In order to receive useful feedback on lab assessments, you must submit in the correct format and your code must compile and run.

Submission

7. Upload your code before the end of the lab period to the associated dropbox folder. It is important to get the submission format correct in order to facilitate future labs. Only one person in the group needs to upload the code.
 - The code should be submitted as `#.zip`, where `#` corresponds to your group number, e.g., group 12 should submit a file called `12.zip` which contains a file called `SimpleArrays.java` when unzipped.
 - You should not include your student ID or name in group submissions. In the future, other groups will be anonymously reviewing your lab submissions.
