

Assignment 3

The Assignment 3 will consist of exercise 14.3. The exercise sheet can be found in D2L (*Week 8 material*). An example main and the output it generates, as well as a UML diagram, can be found in the course repository (*Lesson14*).

You will need to submit the assessment in the appropriate dropbox, following the general submission instructions. The rubric file explains how the assessment will be marked, and you are encouraged to modify the sample `main()` to explore the different cases presented in the rubric.
